ABSTRACT

Now environmental protection is a priority in managing problems at the social, legal, economic and political levels. The authors set the task based on the importance of the role of the state in this aspect – to analyze the state policy of Russia and a number of foreign countries in the direction of environmental management. The research focus concerned the classification of the main policy areas of environmental management regulation and the identification of problems related to special state activities in this area. As a result of the study, the authors concluded that the terminology in the field of environmental management is insufficient elaboration, a generalized international law enforcement practice and an effective security mechanism are absent and there are many resulting contradictions related to the above in public policies in the field of environmental management at various levels.

Keywords: state, legal regulation, environmental management, environmental protection, legal protection of natural resources, ecological sustainability, environmental safety.
