ABSTRACT

Being under the close attention of the global system, the Arctic plays an important role in the economic, political, social, and environmental development of the world community as a whole. Harsh and severe climatic conditions and mineral deposits' inaccessibility complicate the exploration, production, and development of Arctic resources. However, future changes in climatic conditions allow effectively realizing the economic potential of the Arctic shelf. In turn, the increase and opening of new land transport routes require an assessment and scientific justification of measures financing the development of transport infrastructure in the Arctic Zone of the Russian Federation with due regard to transport types, which determines the relevance of this scientific research.

Keywords: country's security, set of measures, scientific approaches, substitution, stronghold area, assessment, development, transport infrastructure, strategy, financing, economy.
