ABSTRACT

This article examines the dependence of the indicators of the Sustainable Development Goals, as well as determining the position of the Russian Federation in achieving the indicators under consideration. The paper investigates the interrelation of indicators of the main Sustainable Development Goals that characterize the standard of living and innovative development. To determine the relationship between the indicators, as well as the grouping of countries to achieve these indicators. The paper uses methods of multidimensional statistical analysis. The results obtained allow us to draw conclusions about the relationship of the key SDG indicators.

Keywords: Sustainable Development Goals, standard of living, innovative growth, achievement of SDGs, achievement of SDGs in Russia, poverty, innovative growth.
